Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-101 are rejected under 35 U.S.C. 103(a) as being unpatentable over Montero et al in view of Fahlsing.

Montero et al discloses system for dissipating heat generated by an electronic component, system comprising controllable cooling element and a control system for controlling cooling element, wherein control system adjusts a speed of operation of cooling element in response to variations in power consumption of electronic component, see page 1 col 1 paragraph 6 , page 1 col 2 paragraph 8, page 2 col 2 paragraph 26-28, page 3 col 2 paragraph 37, page 4 col 1 paragraph 39. Montero et al lacks disclosing spikes in power consumption . Fahlsing discloses spikes in power consumption , see col 15 lines 1-35 and col 7 lines 50-55. It would have been obvious to one of ordinary skill in the art to combine the spikes in power consumption of Fahlsing with system for dissipating heat of Montero et al for improved efficiency.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Davis et al , Shih and Canon disclose cooling heat generated .
